

ZOSONEIR International Standard v1.0

Chapter 2 — Normative References (参考文献)

《完全正式版（英語）》

2. Normative References

This chapter lists documents, frameworks, and conceptual materials that form the intellectual foundation of the ZOSONEIR International Standard v1.0.

The references in this section are not legally binding and do not impose technical requirements.

They serve to provide context, conceptual grounding, and alignment with broader philosophical, ethical, and civilizational studies.

Because ZOSONEIR is a conceptual civilizational framework, the references include

academic research, international ethical guidelines, philosophical works, and internal conceptual documents relevant to the structure of this standard.

Normative references are classified into three categories:

2.1 International Ethical and Governance Frameworks

These documents establish globally recognized principles for ethics, transparency, and responsibility.

- UNESCO: Recommendation on the Ethics of Artificial Intelligence (2021)
- OECD: Principles on Artificial Intelligence (2019)
- UN: Universal Declaration of Human Rights (1948)
- IEEE: Ethically Aligned Design (2019)

These global frameworks inform the ethical grounding of ZOSONEIR, including fairness, transparency, nondiscrimination, and human dignity.

2.2 Philosophical, Civilizational, and Systems Foundations

These works provide structural or philosophical insight relevant to ZOSONEIR's conceptual architecture.

- Norbert Wiener: Cybernetics (1948)
- Niklas Luhmann: Social Systems Theory
- Hannah Arendt: The Human Condition
- Joseph Tainter: The Collapse of Complex Societies
- Talcott Parsons: Systems of Modern Societies
- Thomas Kuhn: The Structure of Scientific Revolutions

These references support ZOSONEIR's multi-layer governance, societal resilience, and civilizational phase-transition framework.

2.3 Internal ZOSONEIR Conceptual Documents

These documents originate from the ZOSONEIR development process and constitute the internal foundation for the standard.

- REISHIN Records — Chapter 1 to Chapter 9 (Takahisa Ikeda, 2024–2025)
- Quantum Operative Interface (QOI) Framework — Draft
- Transparency Architecture L0–L3 Preliminary Notes
- Ethical Interoperability Model — Prototype v0.8
- Civilizational Layer Structure — Internal Working Draft

These documents are considered core conceptual references and provide

direct lineage to the structure of ZOSONEIR v1.0.

2.4 Nature of References

Because ZOSONEIR is a conceptual evolving standard, the references listed are:

- Non-prescriptive
- Non-normative in a legal sense
- Expandable and modifiable
- Open to reinterpretation
- Supplementary to the user's own conceptual framework

Users may add or substitute references as the standard evolves into future versions.
