

ZOSONEIR International Standard v1.0

Chapter 3 — Terms and Definitions（用語定義）

《完全正式版（英語）》

3. Terms and Definitions

For the purposes of this document,
the following terms and definitions apply.

These terms constitute the conceptual vocabulary of the ZOSONEIR International Standard v1.0 and shall be interpreted within the philosophical, ethical, and civilizational context established in Chapters 1–2.

3.1 ZOSONEIR

A conceptual civilizational framework that integrates ethics, transparency, multi-layer governance, cultural interoperability, and human-centered decision-making.

3.2 Resonance (共鳴)

A dynamic state in which multiple entities—human, AI, cultural, or institutional—achieve coherent alignment that enhances understanding, trust, and cooperative behavior.

3.3 Transparency Architecture (透明性アーキテクチャ)

A four-layer structural model (L0–L3) defining the flow of information, accountability, and decision validation within the ZOSONEIR system.

3.4 L0 – Foundational Knowledge Repository

The base layer containing essential knowledge, historical data, ethical principles, and conceptual definitions used by higher layers.

3.5 L1 – Ethically Constrained AI Systems

AI systems operating under explicit ethical constraints, offering explainability, bias detection, and human-centered alignment.

3.6 L2 – Independent Oversight Nodes (独立監督ノード)

Neutral entities responsible for monitoring transparency, fairness, and ethical compliance across layers.

3.7 L3 – Human Governance Authority (人間ガバナンス権限)

The final decision-making layer where humans retain ultimate authority over actions, interpretations, and implementation.

3.8 Ethical Interoperability (倫理相互運用性)

The capacity for different cultures, value systems, and societal structures to harmonize ethical principles without requiring uniformity.

3.9 Voluntary Agency (自発的選択権)

The principle that all individuals and groups must retain freedom of choice without coercion, exclusion, or discrimination.

3.10 Identity Neutrality (アイデンティティ中立性)

The rejection of discrimination or selection based on inherent characteristics such as race, gender, religion, ethnicity, or belief.

3.11 Conceptual Standard (概念標準)

A non-prescriptive framework that provides foundational principles, structures, and models for civilizational development, without enforcing technical or legal mandates.

3.12 Cultural Variant Nodes (文化変種ノード)

Localized adaptations of ZOSONEIR principles tailored to specific cultural or societal contexts.

3.13 Resonance Spiral (共鳴スパイラル)

A cyclical model describing the progressive co-evolution of transparency, trust, cooperation, and civilizational growth.

3.14 Human–AI Co-Responsibility (人間-AI 共責任)

The cooperative model in which humans and AI share supportive roles, while human judgment remains primary.

3.15 Geopolitical Resilience (地政学的レジリエンス)

The system's ability to withstand ideological, cultural, or political pressures while maintaining ethical integrity.

3.16 Adoption Protocol (採用プロトコル)

The framework by which individuals, communities, or organizations voluntarily adopt, adapt, or extend the ZOSONEIR model.

3.17 Non-Discrimination Principle (非差別原則)

The explicit prohibition of exclusion, selection, or preferential treatment on the basis of identity attributes.

3.18 Evolution Loop (進化ループ)

A feedback-based mechanism through which ZOSONEIR continuously updates and adapts based on new knowledge, cultural development, and ethical insights.
